PAPER

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary	Application No. 10/700,299	Applicant(s) DIFRANCESCO, DAVID	
	Examiner DAVID CZEKAJ	Art Unit 2621	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 9-26 is/are pending in the application.
 4a) Of the above claim(s) ____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) ____ is/are allowed.
- 6) ☒ Claim(s) 9-26 is/are rejected.
- 7) ☐ Claim(s) ____ is/are objected to.
- 8) ☐ Claim(s) ____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 31 October 2003 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
 Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
 Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
 a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. ____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

1. Claims 9-13, 16-17, and 20-24 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ramsay et al. (4757374), (hereinafter referred to as "Ramsay") in view of Lippman (7369179).

Regarding claim 9, Ramsay discloses an apparatus that relates to video conversion methods (Ramsay: column 1, lines 4-9). This apparatus comprises "a flat panel display to display a first and second frame" (Ramsay: figure 1), "a control unit coupled to the display configured to determine the first and second video frames and drive the flat panel display with the video frames" (Ramsay: figure 1; column 3, lines 55-59; column 4, lines 55-59), "a film recorder to record images displayed on the display" (Ramsay: figure 1, wherein the recorder is the camera), and "an adjustment mechanism coupled to the flat panel display and recorder configured to adjust the orientation of the display relative to the recorder" (Ramsay: figure 1; column 3, lines 55-59; column 4, lines 55-59; column 6, lines 1-37). However, this apparatus lacks the data associated with the frames as claimed. Lippman teaches that prior art inverse telecine processes are often a time consuming and expensive process (Lippman: column 2, lines 8-

25). To help alleviate this problem, Lippman discloses "data associated with the first and second frames" (Lippman: figures 3 and 10; column 10, lines 20-27; column 10, lines 55-65, wherein the data is the lines of resolution). Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to take the apparatus disclosed by Ramsay and add the processing taught by Lippman in order to obtain an apparatus that helps reduce the time and cost of video conversion systems.

Regarding claim 10, note the examiners rejection for claim 9, and in addition Ramsay discloses "the control unit directs the recorder to open and close a shutter" (Ramsay: figure 1, wherein opening and closing a shutting are known operations of a camera).

Regarding claim 11, Lippman discloses "the video data is encoded in NTSC" (Lippman: column 1, lines 50-52).

Regarding claim 12, although not disclosed, it would have been obvious to encode the video in the MPEG format (Official Notice). Doing so would have been obvious in order to more easily transmit large amounts of data of limited bandwidth networks.

Regarding claim 13, Ramsay discloses "the film recorder records an image of the first frame in a first frame of film media and records an image of the second frame in a second frame media" (Ramsay: figure 1, wherein the camera records the first and second frames into first and second frame medias).

Regarding claim 16, Lippman discloses "the frame rate for a first frame is substantially similar to a frame rate for film" (Lippman: column 8, lines 34-45).

Regarding claim 17, Ramsay in view of Lippman disclose "positioning a film camera and flat panel display relative to each other such that the optical axes of the camera and display are substantially parallel" (Ramsay: figure 1), "receiving a portion of a stream of video" (Ramsay: figure 1, wherein the portion is the first frame), "determining first data for a first image from the portion" (Lippman: figures 3 and 10; column 10, lines 20-27; column 10, lines 55-65, wherein the data is the lines of resolution), "driving the display" (Ramsay: figure 1), "displaying the first image on the display and recording the first image" (Ramsay: figure 1), "advancing the film media" (Ramsay: figure 1, wherein the film is advanced on a frame by frame basis), "determining second data" (Lippman: figures 3 and 10; column 10, lines 20-27; column 10, lines 55-65, wherein the data is the lines of resolution), and "driving the display, displaying the second image, and recording the second image" (Ramsay: figure 1).

Regarding claim 20, note the examiners rejection for claim 11.

Regarding claim 21, note the examiners rejection for claim 12.

Regarding claim 22, Lippman discloses "the frame rate for the stream compared to the rate for the film is equal, greater, or lesser" (Lippman: column 8, lines 35-45).

Regarding claim 23, note the examiners rejection for claim 17. The examiner notes the processing will continue for all frames of the sequence.

Although not disclosed, it would have been obvious to determine the total number of frames and determine a subsequent cost based on that number (Official Notice). Doing so would have been obvious in order to better help determine whether the conversion can be done in a cost efficient manner.

Regarding claim 24, Lippman discloses "the first data is associated with a single frame and second data is associated with more than one frame" (Lippman: figures 3 and 10; column 10, lines 20-27; column 10, lines 55-65).

2. Claims 14-15, 18-19, and 25-26 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ramsay et al. (4757374), (hereinafter referred to as "Ramsay") in view of Lippman (7369179) in further view of Jones et al. (7053927), (hereinafter referred to as "Jones").

Regarding claim 14, note the examiners rejection for claim 9, and in addition, claim 14 differs from claim 9 in that claim 14 further requires a DLP. Jones teaches that prior art processing systems introduce noise and other artifacts into the video stream (Jones: column 2, lines 36-40). To help alleviate this problem, Jones discloses "an external illumination source comprising a digital light projector" (Jones: column 6, lines 35-40). Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to implement the DLP taught by Jones in order to better help reduce noise and artifacts in the video stream.

Regarding claim 15, note the examiners rejection for claims 9 and 14.

Regarding claim 18, note the examiners rejection for claim 14.

Regarding claim 19, note the examiners rejection for claim 14.

Regarding claim 25, although not disclosed, it would have been obvious to include a plurality of digital light projectors (Official Notice). Doing so would have been obvious in order to help reduce noise and other artifacts from the video stream.

Regarding claim 26, note the examiners rejection for claim 14.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure:

US-6226033	05-2001	Glasgow
US-6842194	01-2005	Sugihara
US-4754334	06-1988	Kriz et al.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to DAVID CZEKAJ whose telephone number is (571)272-7327. The examiner can normally be reached on Mon-Thurs and every other Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mehrdad Dastouri can be reached on (571) 272-7418. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Art Unit: 2621

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
